3.) GABRIEL NICO UDTOHAN

TOTAL PRICING SYSTEM

1. Problem Statement

- This project helps in checking the total price of one or multiple products, which is way more efficient than adding prices manually.

2. Project Objectives

- To develop a total pricing system that's efficient
- To make adding prices more organized

3. Planned Features

- Enter name of product/s and price/s
- Calculate total price
- Show the list of products that were input by user and also the total price

4. Planned Inputs and Outputs

- The system would need inputs of product names and product prices in order to output the products input and the total price
